# Description

I created this free app to thank the B4X community's members who share their knowledge in the forums. It includes code snippets found in the B4A forum Android Code Snippets and in the B4A-Beginner's Guide file.
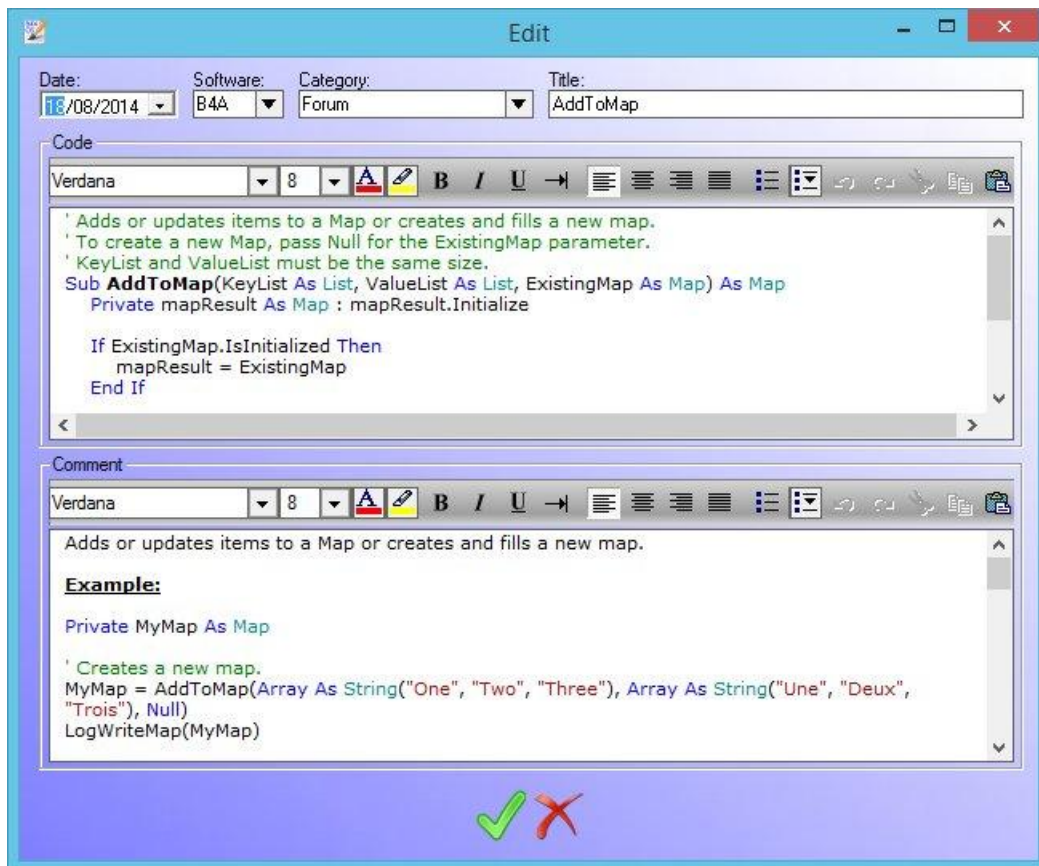

<u>Main Window:</u>
You can, in the order of icons:
- Set your application Setting (change the language, choose not to display tooltips, etc ...).
- Add, Edit or Delete (after confirmation) a record.
- Filter records based on Software and/or Category.
- Search for text in one field (Title, Code or Comment).
- Show this Help file
- Check for Updates
- Go to Forum (URL entry in Setting).
- Show About window.
- Exit this application

<u>Update Code:</u>
- You can Paste text in the Title, Code and Comment fields. Fields Code and Comment are RTF controls. To keep the syntax highlighting, you must paste the code ou comment text after copying it in B4A. If you copy a code from internet, you must paste it into B4A then copy/paste in this application.
- If you want include a Tab character (Ascii 9), press CTRL+i or click the arrow Tab.
- Press F5 to show the content of a previously entered field.

Application Settings:

- You can filter records at startup by choosing a Software and/or a Category.
- You can choose the Language and whether to show Tooltips.
- Enter the Forum's URL to consult (B4A Code Snippets: https://www.b4x.com/android/forum/forums/code-snippets.59/)

Filter :

- You can only display the corresponding records of your choice (Software/Category)

Search:

- Search text in one field (Title, Code or Comment)

Check for Updates :
If there is a new version, you can download and install automatically.

About:
Some information about this application and the EULA you have to observe.
